

# Now taking appointments for The Lazarus Foundation

July 2008

## *“Brain Net Program”*

### **Intensive Therapy Program for Brain Injured**

Each person will be individually assessed and given a therapy program to be carried out at home, with the assistance of family and friends. The individually tailored program involves working with the patient's development from one to four hours a day depending on the patients profile and requirements.

April 2008

Board Certified Chiropractic Neurologist

## *Chiropractic Neurology*

**Chiropractic Neurology is the most advanced chiropractic approach ever developed. It is considered by many to be the most advanced form of health care known in the world. Simplified, this healing art combines chiropractic with advanced neurology training. Because of the extensive and extremely advanced training, Chiropractic Neurology is now receiving NOCA certification—making it the only chiropractic specialty to be considered equal to medical field specialties.**

**Doctors of Chiropractic Neurology treat the same ailments and symptoms that chiropractors treat, as well as nearly all of the same ailments and symptoms that medical neurologists treat.**

**Chiropractic Neurologists have a simple goal: to heal without using drugs or surgery. By using appropriate methods of therapy (i.e. chiropractic manipulations, visual or auditory therapy, spatial imaging, proprioceptive therapy, neuromuscular re-education, neurological exercises, manual traction, intersegmental traction, cryotherapy, or other modality) chiropractic neurologists are able to successfully alleviate symptoms from acute/chronic pain, movement disorders, numbness and tingling, tremors, headaches, vertigo, and more.**
